SUMMARY

Product Manager with 10+ years across frontend engineering, business analysis, and product management, currently building agentic AI systems — including Agency OS and Marketing OS — and Salesforce Agentforce proof-of-concepts on Deloitte's AI innovation team, three of which have converted into signed client engagements. Hands-on with Cursor and Claude Code — prototyping client-facing tools, building personal apps, and shipping internal tooling used by the team. Skilled at translating ambiguous stakeholder and SME input into scoped, buildable product decisions, weighing feasibility, sequencing, and business impact along the way.

EXPERIENCE

Deloitte Consulting India Pvt. Ltd., Bangalore - Senior Product Specialist

AUG 2024 - PRESENT

Part of Deloitte's AI innovation team, building agentic AI systems and Agentforce proof-of-concepts ahead of client investment decisions.

- **Marketing OS** — Offshore product owner for a 4-agent system (performance analysis, optimization recommendations, real-time monitoring, reporting) that measures live campaigns against the KPIs set in each campaign brief. Translate the marketing SME's domain design into buildable requirements, set acceptance criteria, and run grooming and sprint ceremonies with dev and QA to deliver against the timeline. Agent logic built and validated on synthetic data, now being built as a standalone product for multi-client sale.
- **Agency OS** — Offshore product owner for an agentic AI system turning a marketing team's raw campaign inputs (BOM, meeting notes, historical data) into campaign briefs and project plans in under an hour, down from up to a week manually. Ran user interviews that surfaced the team's reliance on Google's ecosystem, prompting a build shift from Deloitte's internal platform to GCP. Fed into backlog prioritization through build, and now drive rollout — running release activities and showcasing the product across teams to build adoption ahead of launch.
- **AGCO (case management)** — Wrote the agent instructions and skill files for a Salesforce Agentforce agent that searched workshop manuals, technical specs, and historical case data to surface fixes for customer service reps, cutting case research from 2-3 days to minutes. Converted into a signed Deloitte engagement.
- Wrote the agent instructions and skill files for two further Agentforce pursuit POCs, working with tech and QA to deliver both within agreed timelines. One replaced a broadcaster's manual process of checking five separate systems for crew availability, cost, and travel, recommending optimized, budget-compliant production teams automatically. The other replaced a call center agent for partner product, tiering, and appointment scheduling queries, cutting response time to zero wait with 24/7 availability. Both converted into signed engagements.
- Build interactive HTML prototypes with live backend integrations using Cursor and Claude Code, used in client pitches and demos to make agent concepts tangible before build commitment.
- Built Claude Code skills, now used across the team, to automate product workflows — generating user stories in team format and pushing them straight to Git and the Kanban board, and converting Figma designs into frontend-ready user stories, cutting time spent writing stories manually.

Deloitte Consulting India Pvt. Ltd., Bangalore - Product Manager

MAR 2022 - JUL 2024

- Owned release planning and rollout sequencing for a Class II SaMD diabetes management app (Eli Lilly) and a Bluetooth-enabled medication tracking system, coordinating with development teams of 12-14 across 5+ releases to clear cross-team dependencies and keep sprints unblocked.
- Worked with Eli Lilly's product owners to prioritize features for each release, weighing technical feasibility, sequencing dependencies, and delivery impact; translated agreed priorities into user stories with acceptance criteria and supported UAT through production release with zero critical bugs.
- Coordinated with Eli Lilly's product owners to define and build a patient companion app with integrated health monitoring on iOS and Android, meeting FDA compliance requirements throughout.

- Bluetooth-enabled medication tracker reached a 95% satisfaction score from a pilot group of UAT testers.
- Improved release delivery time by 25% through tighter sprint planning and backlog prioritization.

Coffeebeans Consulting India Pvt. Ltd., Bangalore - *Frontend Engineer*

JUN 2021 – MAR 2022

- Worked as an external consultant on Tesco's delivery fulfilment portal, building features in React.js and collaborating daily with the scrum master and Tesco's in-house development team through sprint ceremonies and code reviews. Increased code coverage by 20%.

Wipro Digital, Bangalore - *Senior Software Developer*

JAN 2021 – JUN 2021

- Hired for a hybrid analyst-designer-developer role on Shell's internal employee portal: worked with product owners to understand what they wanted built, produced high-level wireframes, and built the workflows in React.js using the existing design component library.

Deloitte Consulting India Pvt. Ltd., Bangalore - *Business Analyst*

OCT 2015 – DEC 2020

- **Southwest Airlines ("Day of Travel")** — Worked with the design team through discovery sessions and design reviews to shape the app's look and feel, then ran sprint ceremonies and owned on-time delivery through development, testing, and deployment. Covered seamless home-to-gate travel including car booking and indoor navigation from drop-off through security, baggage, and boarding.
- **Giant Eagle (customer loyalty app)** — Managed stakeholders across engineering and third-party vendors delivering loyalty-based push offers and shopping-preference personalization, running sprint ceremonies and owning on-time delivery through development, testing, and deployment.
- **HP (customer support portal)** — Worked with HP's product owners to scope enhancements to their existing customer service portal, then owned backlog grooming, sprint ceremonies, and on-time delivery through development, testing, and release.
- **Hitachi (IoT asset monitoring)** — Worked with IoT SMEs and the design team to define requirements for an asset health monitoring dashboard pulling real-time sensor data from factory machinery, using ML/image processing to flag predictive maintenance needs. Ran sprint ceremonies and owned delivery through build and test as a proof-of-concept pilot.

SKILLS

Product & Discovery Feature prioritization, stakeholder & SME requirement translation, KPI definition, roadmapping, backlog management, Agile/Scrum, SAFe

AI & Platforms Agentic AI product design, Salesforce Agentforce, Cursor, Claude Code, ethical-AI review

Technical JavaScript, React.js, Node.js, iOS, Android, AWS/GCP/Azure, microservices

PERSONAL PROJECTS

Build and ship small full-stack apps using AI-assisted development ("vibe coding") with Cursor and Claude Code:

- **Personal knowledge base** ("second brain") built as Claude Code skills — captures meeting notes and a separate trail of key decisions, so past context and decisions are searchable through chat.
- **Pregnancy journaling app** (React + Firebase, packaged as an Android app) — tracks medication schedules, symptoms, and doctor visit notes for expecting mothers.
- **Car expense tracker** (React + Supabase) — logs fuel, maintenance, and running costs.

CERTIFICATIONS

- Certified SAFe 6.0 Agilist — Scaled Agile (Mar 2025)
- Human-Computer Interaction (HCI) for AI Systems Design — University of Cambridge Online (Apr 2025)
- Innovation of Products and Services: MIT's Approach to Design Thinking — MIT Sloan Executive Education (May 2025)

EDUCATION

B.Tech, Electronics and Communications Engineering — Government Model Engineering College, 2011–2015
